# CONTENTS

<b>Chapters</b>	<b>Pages</b>
1. Introduction	1-2
2. Distribution of Mithun population	2
3. Meteorological data and agro-ecosystem	2-4
4. Existing Mithun fodder resources in Nagaland	4-28
4.1. Forest based foliages	4-22
4.1.1. Nutrient composition	4-8
4.1.2. Mineral content in forest based foliages	8-10
4.1.3. Seasonal variation in the mineral content of foliages	11
4.1.4. <i>In Sacco</i> Degradability Studies	11-19
4.1.5. Important Fodder Trees/Grasses	20-22
4.2. Cultivated fodder crops	22-27
4.2.1. Paddy straw	22-23
4.2.2. Maize	23-24
4.2.3. Napier	25-26
4.2.4. Broom grass	26
4.2.5. Cowpea	27
4.2.6. Signal grass	27
4.2.7. Oats	27
4.3. Locally available concentrate feeds	27-28
5. Intensive fodder production systems for year round availability of green fodder under Nagaland condition	28-37
5.1. Catch cropping	28-29
5.2. Intercropping	30
5.3. Alley cropping	30-31
5.4. Hedgerow intensive system of fodder production	31
5.5. Overlapping cropping	32
5.6. Agro techniques for adoption of Crotalaria+maize-winter maize-hybrid napier+cowpea under overlapping system	32
5.7. Relay or sequential cropping	33-37
5.7.1. Prerequisites for successful relay cropping	33-34
5.7.2. Package of agro techniques essential for intensive cultivation of fodder crops in Nagaland	34
5.7.3. Fodder crop cafeteria for year round cultivation of green fodder	34-37
6. Summery	38
7. Conclusion	38-39
8. References	39-41
